A vertical cross-section diagram of soil horizons and the organisms that inhabit them. The soil is divided into layers: the top layer is labeled 'Surface litter (O-horizon)' and contains fallen leaves and flowers; below it is the 'Topsoil (A-horizon)' containing earthworms and plant roots; the next layer is labeled 'Subsoil (B- and C-horizons)' and contains a mole; the bottom layer is 'Parent material (bedrock)'. Various soil organisms are shown with labels: 'Root nodules: nitrogen-fixing bacteria' (yellowish nodules on roots), 'Mite' (small red arachnid), 'Nematode' (small worm-like creature), 'Protozoa' (microscopic organisms), 'Fungus' (mycelium), and 'Bacteria' (microscopic organisms). A vertical arrow on the right indicates the direction of increasing depth.
